

Delivering business success through the continuous improvement of the capabilities of people and process

Enhanced Team Leader Training

THE NEED:

Team Leaders have a pivotal role in manufacturing: they manage the resources of labour, materials, machines and method and have the responsibility for implementing change to achieve higher performance in Quality, Cost and Delivery. The individual skills of the Team Leader have a significant effect on the long term sustainability of continuous process improvements.

THE SOLUTION:

Those completing the Industry Forum Enhanced Team Leader Training will be able to demonstrate significantly increased sustainability of process improvement practices with new skills locked in and working.
