

Lean Foundation Workshop

The Industry Forum Lean Foundation Workshop programme will equip key personnel with the knowledge and practical awareness of business improvement tools and techniques.

The Need

Managers at all levels: senior, middle and first line supervisors need to understand – on a practical basis – the continuous improvement techniques necessary for lean competitive manufacturing.

The Solution

The Industry Forum Real Time Workshop is a flexible, fast paced, four-day workshop that has been developed for:

- Senior managers who need the skills to develop and support an improvement policy within their own company
- Middle managers who need to take ownership of shop floor improvement activities
- First line supervisors who need the tools and techniques to lead teams through improvement programmes

The Product Overview

In the Real Time Workshop delegates set-up, analyse and improve a real production line in the ultimate hands-on learning manner. Each improvement tool is introduced to the delegates in a concise teach point session and then the delegates use what they have learned to make physical and organisational improvements to the manufacturing process.

Real products - Real processes - Real problems - all within a 'real time' environment.

Topics covered:

- QCD measures and data analysis
- 5C/5S Workplace Organisation
- Understanding work and eliminating the '7 Wastes'
- Implementation of Standardised Work
- Running processes through Visual Management
- Practical Problem Solving
- Line Balance of processes to allow them to flow

Business Excellence Through Inspired People

Lean Foundation Workshop

The Investment

The workshop is designed to take between 5 and 14 delegates. The course can be delivered in your workplace or at an off site venue. In-house training can be tailored to suite individual company requirements. Price on application.

The Return on Investment

At the end of the workshop delegates will be able to:

- Analyse key Quality, Cost and Delivery performance measures and prioritise areas for improvement
- Practically apply a range of improvement techniques to improve the performance measures
- Implement systems and processes to sustain the improvements made

The Lean Foundation Workshop can be the 'kick-start' your organisation needs to get the benefit from lean and competitive manufacturing.

Client Reviews:

"The practical content ensures full interest and attention and demonstrates theory turned into practical improvements."

Les Stickleby, Team Leader, ABRO Bovington

"The lessons learnt each day could be related to the actual production process and improvements made...far better than just reading from a book".

Nick Lamb, CNC Machinist, Messier Dowty

"It became very apparent that our staff who attended had developed their overall understanding. This will now make our progress more cohesive and structured."

Bob Spencer, Managing Director, Beaufort Engineering Ltd.
